VMware, Inc. was founded in 1998 and is dedicated to expanding the range of possibilities for computing through the use of virtual machines and virtualization technology. VMware is proud to demonstrate the wide variety of applications they have developed that utilize the benefits of virtual machines.

VMware® Workstation is our flagship virtual machine development environment, allowing users to create, configure and run multiple virtual machines within Microsoft Windows and standard Linux host environments.

The **VMware® Lab Manager** application suite creates and manages online virtual machine libraries that enable users to create and run personal copies of pre-configured virtual machines. Lab Manager provides a fully interactive web interface for accessing and managing the library and for interacting remotely with the virtual environment.

Mac OS X Virtualization Technology - A demonstration of VMware's first virtualization product for the Intel-based Apple Mac OS X platform.
